No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence is that of a human solute carrier type 2A (SLC2A)

nucleic acid Genetic screens were designed to identify modifiers of the
p33 pathway in Drosophila in which p53 was overexpressed. Human

orthologues (polynuclectides and polypeptides) of one such modifier were

then identified, including the present nucleic acid. SLC2As are glucose

transporter proteins with sugar transporter domains. SLC2A nucleic acids

and polypeptides are attractive drug targets for the treatment of

pathologies associated with a defective p53 signalling pathway, such as

cancer. The invention provides in vitro and in vivo methods of assessing

SLC2A function. Modulation of an SLC2A or its binding pathway as useful

cormal and disease conditions and for developing diagnostic and

therapeutic modalities of p53-related pathologies. SLC2A-modulating

agents that act by inhibiting or enhancing SLC2A expression, directly or

conditions and solved for as attransport or

binding activity, can be identified using methods provided. Modulators

conditions and conditions conditions conditions and conditions conditions 
                                                                                                                                                                                      Identifying candidate p53 pathway modulating agent as therapeutic target for disorders of defective p53 function e.g. cancer, by assaying purified solute carrier family 2 (SLC2A) polypeptide or nucleic acid with a test

Identifying candidate p53 pathway modulating agent as therapeutic target for disorders of defective p53 function e.g. cancer, by assaying purified solute carrier family 2 (SLC2A) polypeptide or nucleic acid with a test agent

Disclosure; Page 42-43; 58pp; English.

The present sequence is that of human solute carrier type 2A (SLC2A)

nucleic acids 13642003. Genetic screens were designed to identify

modifiers of the p53 pathway in Drosophila in which p53 was

coverexpressed. Human orthologues (polynucleotides and polypeptides) of

one such modifier were then identified, including nucleic acid 13642003.

SLC2As are glucose transporter proteins with sugar transporter domains.

SLC2A nucleic acids and polypeptides are attractive drug targets for the

treatment of pathologies associated with a defective p53 signalling

pathway, such as cancer. The invention provides in vitro and in vivo

methods of assessing SLC2A function. Modulation of an SLC2A or its

binding partners is useful for understanding the association of the p53

pathway and its members in normal and disease conditions and for

developing diagnostic and therapeutic modalities of p53-related

bathologies. SLC2A-modulating agents that act by inhibiting or enhancing

SLC2A expression, directly or indirectly, e.g. by affecting an SLC2A

function such as transport or binding activity, can be identified using

methods provided. Modulators include small molecules, nucleic acids,

antibodies, antisense oligonucleotides and phosphothioate morpholino (claimed) oligomers

The present sequence is transporter and ion channel-1 (TRICH-1) cDNA.

TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, angina and hypertension, neurological cuckers including Alzheimer's disease, ammesia, bipolar disease, disorders including Alzheimer's disease, ammesia, bipolar disease, cerebral neoplasms, Pick sdisease, Muntington's disease and parkinson's disease, demyelinating disease, mental disorders including extroped and seasonal affective disorders muscle mood, anxiety, Schizophrenia and seasonal affective disorders including deraction parkinson's disease, demyelinating diseases, mental disorders including AIDS, adult respiratory distress syndrome (ARDS), allergies, carantermyositis, arrhythmias and asthma and immunological disorders including AIDS, adult respiratory distress syndrome (ARDS), allergies, canaemia, diabetes mellitus, rheumatoid arthritis, scleroderma, Sjogren's syndrome, systemic lupus erythematosus and other diseases including sickle cell anaemia, Wilson's disease, cataracts, infertility, pulmonary sickle cell anaemia, Wilson's disease, disease, Addison's disease, contassis drave addisors, cancers confections. TRICH DNA is useful in gene therapy and in diagnostic

The present sequence is that of human solute carrier type 2A (SLC2A) nucleic acids 7657680. Genetic screens were designed to identify mudifiers of the p53 pathway in Drosophila in which p53 was severable search the p53 pathway in Drosophila in which p53 was severable search modifier were then identified, including nucleic acid 7657680. SLC2As are glucose transporter proteins with sugar transporter domains. SLC2A nucleic acids and polypepides are attractive drug targets for the treatment of pathologies associated with a defective p53 signalling. Dathway, such as cancer. The invention provides in vitro and in vivo methods of assessing SLC2A function. Modulation of an SLC2A or its binding partners is useful for understanding the association of the p53 pathologies. SLC2A-modulating adents that act by inhibiting or enhancing SLC2A expression, directly or indirectly, e.g. by affecting an SLC2A function such as transport or binding activity, can be identified using methods provided. Modulators include small molecules, nucleic acids, antisense oligonucleotides and phosphothioate morpholino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying candidate p53 pathway modulating agent as therapeutic target for disorders of defective p53 function e.g. cancer, by assaying purified solute carrier family 2 (SLC2A) polypeptide or nucleic acid with a test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ProArgGlyArgArgValPheLeuAlaAlaPheAlaAlaAlaAlaLeuGlyProLeuSerPhe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MetThrProGluAspProGluGluThrGlnProLeuLeuGlyProProGlyGlySerAla

The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66931-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUTS and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport discorders such as isothemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is the coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding GLUTX glucose transporter proteins, useful in the prevention, diagnosis and treatment of hexose transport disorders, e.g. ischemia and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; GLUTX; gene therapy; vaccine; hexose transport modulator; hexose transport disorder; ischaemia; diabetes; hyperglycaemia; ss; hypoglycaemia; glucose metabolism disorder; neurodegenerative disease.
